

1. Take two pieces of rectangular cardboard and cut it of the same size.

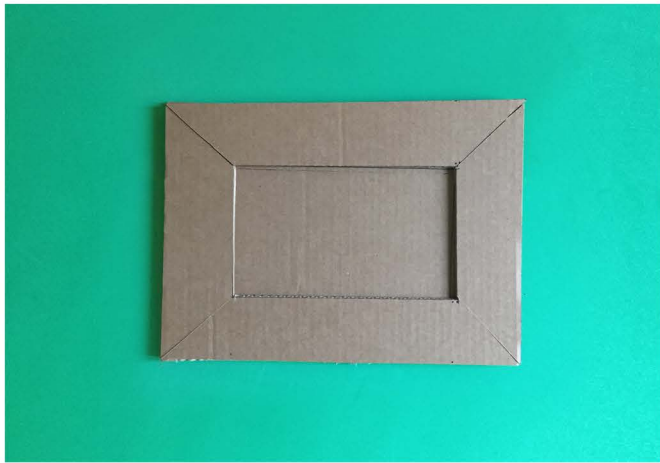

2. Take one piece of cardboard and draw a rectangle at 5 cm distance from each side. Join the angles of the rectangle to each of the 4 angles of the cardboard

3. Cut along the lines you drawn to separate the four sides. Keep the rectangle you have form the centre, you will need it to create the support for the back.

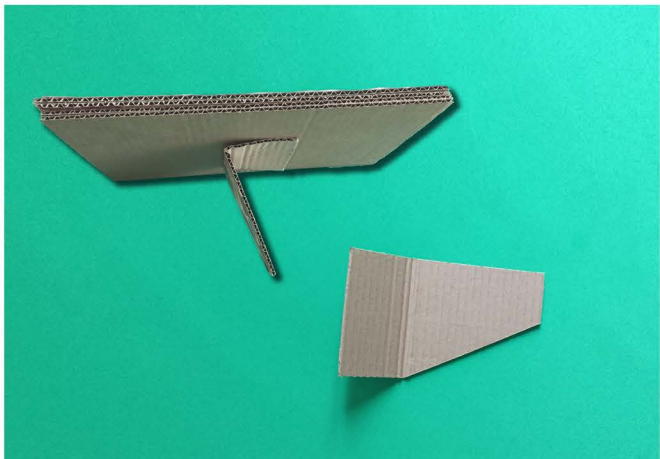

4. Glue the two short sides and just one of the long ones. Take the fourth side and glue only the triangular ends (you need an open side to insert your picture).

5. Glue all the sides on the piece of cardboard left.

6. Download and print all the textures and choose your favourite characters. You have also letters to write your name. Cut them and glue them on your frame to decorate it as you prefer.

7. Take the leftover rectangular cardboard piece and bend vertically one side. Then cut the opposite angle. Finally glue it on the back of your frame. You may want to decorate this part as well.

8. Insert your picture from the unglued side and... your frame is ready!
